

HPV11 E6 Polyclonal Antibody

Catalogue No*:	AB0125-200	Price/Unit*:	300.00
Source:	3	Quantity/unit size*:	600 g
Description:	Goat polyclonal antibody to HPV11 E6. E6 is one primary oncoprotein of high risk HPV types expressed early in the HPV life cycle. After the host cell is infected viral early promoter is activated and a polycistronic primary RNA containing all six early ORFs is transcribed. This polycistronic RNA then undergoes active RNA splicing to generate multiple isoforms of mRNAs. One of the spliced isoform RNAs, E6, serves as an E7 mRNA to translate E7 protein. HPV genome integrate into host genome by disruption of E2 ORF, preventing E2 repression on E6 and E7. Thus, viral genome integration into host DNA genome increases E6 expression. The E6 protein inactivates the tumour suppressor protein, p53 and promote cellular proliferation and the chance of malignancy.		
Immunogen:	Purified recombinant peptide derived from within residues 65 aa to N-terminal of HPV11 E6 produced in <i>E. coli</i>		
Specificity:	Detects HPV11 E6 recombinant fusion protein GFP-E6 expressed in transfected mammalian cells.		
Reactivity:	Reacts against Human papilloma viruses type 11 (HPV11).		
Usage:	Western blot 1:250-1:2,000 Immunofluorescence ND Immunohistochemistry (paraffin) ND Immunohistochemistry (frozen) ND		

Reactivity Chart

Sample	Western Blot	Immuno-fluorescence	Immuno-Histochemistry (p)	Immuno-Histochemistry (f)
transfected cells	+++	ND	ND	ND

Storage: Store at -20 C for long-term storage. Store at 2-8 C for up to one month.

Special instructions: Avoid freeze/thaw cycles.
